

UNIVERSAL REMOTE COMPUTER KEYBOARD**Abstract**

A computer keyboard is configured for navigation of a graphical user interface of a host computer. A keyboard includes a keyboard processor enclosed within a keyboard housing. The keyboard includes a remote control portion which is laterally disposed from an alphanumeric section and having a set of keys for being in electrical communication with the keyboard processor. The remote control portion can be removably coupleable with the keyboard housing. A keyboard housing may include a receiving portion which is adapted to receive a remote control body therein.
